Abstract of EP 0333602 (A1)

Textile structure for making laminated articles, of the type consisting of at least one lap of fibres (1) arranged randomly relative to one another, which is associated with an ordered textile structure (2), these two elements (1, 2) being connected to one another by sewing and knitting, characterised in that: - the textile lap (2) based on ordered yarns consists of a deformable knitted fabric; - the connection is made in such a way that the casts on one needle (3) are produced on the same side as the fabric (2), whereas the casts under a plurality of needles (4) are produced on the same side as the fibre lap (1).
